

Sales Automation System

Team 10

1 Introduction

A Sales Automation System is a software solution designed to manage and automate sales activities. It stores customer data, tracks sales, and manages orders efficiently. Unlike manual processes, it reduces errors and improves speed by digitizing sales operations.

2 Need for Sales Automation

- Handles large volumes of sales data efficiently
- Reduces manual effort
- Improves data accuracy
- Tracks customer interactions and follow-ups
- Manages orders and transactions effectively

3 Key Features

- **Customer Management:** Stores customer details and history
- **Sales Tracking:** Records sales activities
- **Lead Management:** Tracks potential customers
- **Order Management:** Manages and monitors orders

4 Three-Tier Architecture

Three-tier architecture divides the system into three layers for better scalability, security, and maintainability:

- Presentation Tier
- Application Tier
- Data Tier

5 Advantages of Three-Tier Architecture

- Improved security
- Easy maintenance
- Scalability
- Better performance

6 Presentation Tier

This is the user interface layer where users interact with the system.

6.1 Functions

- Collects user input
- Displays information
- Sends requests to application tier
- Shows processed results

6.2 Features

- User-friendly interface
- Fast response
- Interactive design
- Accessible via web/mobile

7 Application Tier

This layer handles business logic and processes user requests.

7.1 Functions

- Sales workflow management
- Business rule implementation (pricing, tax, etc.)
- Customer data processing
- Sales analytics and reporting
- Order validation

7.2 Advantages

- Centralized logic
- Improved security
- Easy updates

8 Data Tier

This layer stores and manages all system data.

8.1 Functions

- Customer data storage
- Sales records management
- Order data handling
- Product information storage
- Data retrieval
- Security and access control
- Data integrity
- Backup and recovery

8.2 Features

- Centralized storage
- High security
- Data consistency
- Efficient handling of large data

9 Conclusion

A Sales Automation System improves efficiency, reduces manual work, and minimizes errors. The three-tier architecture ensures scalability, security, and performance, helping businesses make better decisions.
